► Advanced Settings

A Dreamweaver site is a collection of all of the files and assets you use in your website. A Dreamweaver site usually has two parts: a local folder on your computer where you store and work on files, and a remote folder on a server where you post the same files to the web.

Here you'll select the local folder and a name for your Dreamweaver site.

Site Name:

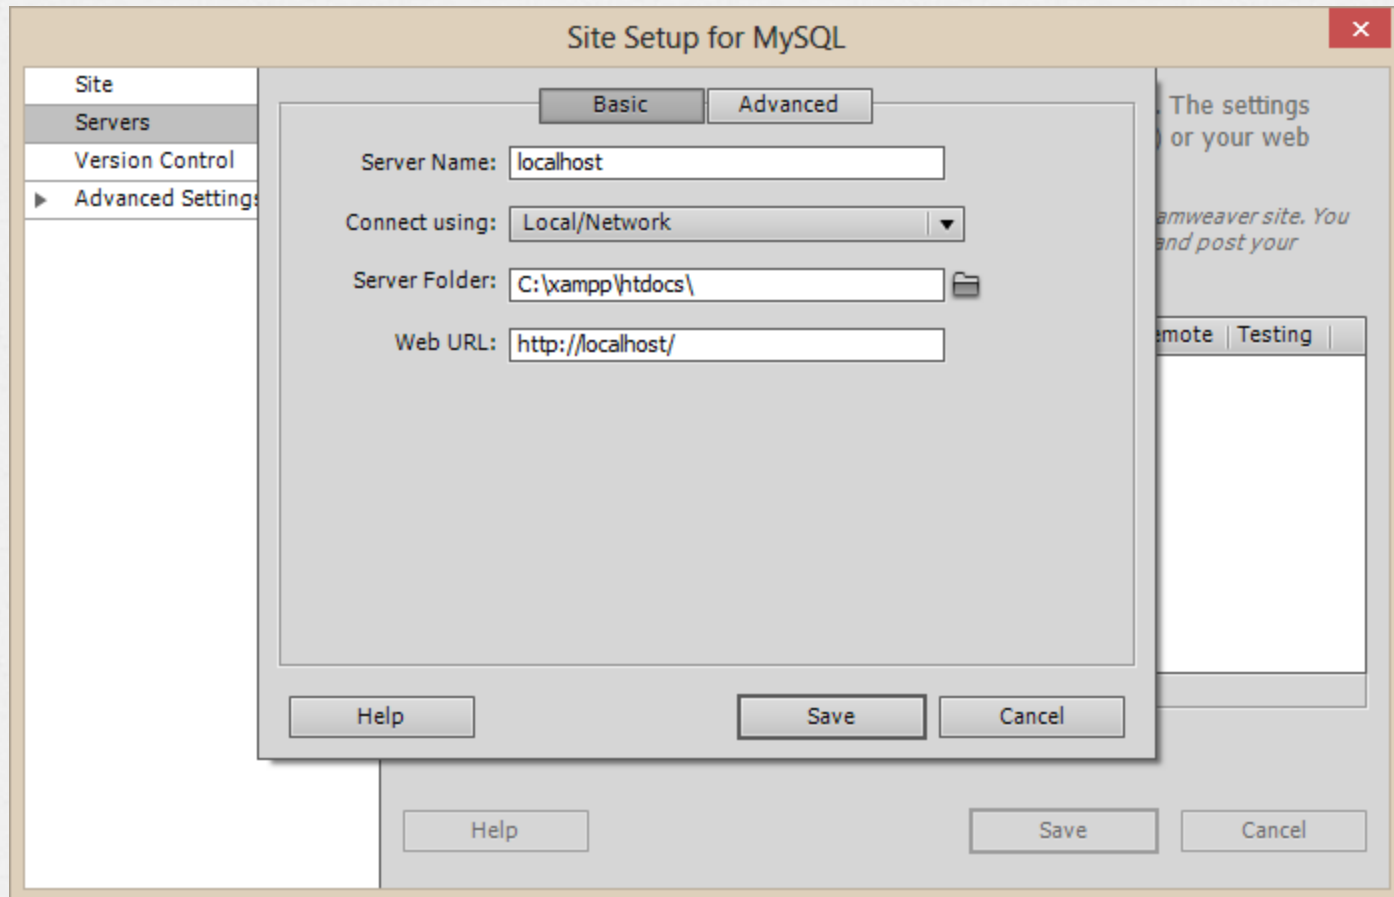

Local Site Folder:

Server Advanced

- Server Model: PHP MySQL

Tick Testing

Site Setup for MySQL

Here you'll select the server that will host your pages on the web. The settings for this dialog box come from your Internet Service Provider (ISP) or your web administrator.

Note: You do not need to complete this step to begin working on your Dreamweaver site. You only need to define a remote server when you want to connect to the web and post your pages.

Name	Address	Connection	Remote	Testing
localhost	C:/xampp/htdocs/	Local/Netw...	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
